

KUM[®]

COSMETICS

Made in Germany

since 1919

WE FORM THE TOP TO THE TOP FORM

The range of new, improved cosmetic pencils, specially designed to suit individual needs, is steadily increasing. These new cosmetic pencils require sharpeners, or tipformers to sharpen and shape the soft and sensitive cosmetic leads cleanly, reliably and exactly. With the help of the KUM® Double-Blade-System® and Tipformer® system cosmetic pencils become a pleasure to use. We make it our business to develop cosmetic formers which are exactly in line with the technical requirements of the various cosmetic pencils and their particular functions. So we have succeeded in producing a range of cosmetic pencil formers which completely satisfies all the requirements concerning smooth handling, easy cleaning, efficient performance and, not least, a modern elegant design. To help you choose the right sharpener for your own cosmetic pencils we have on page 58 a pencil quick check to enable you speed up your selection.

Special color requests for the tips and containers or for the print can easily be met, based on certain minimum quantities. Please specify your wishes and we will gladly submit our recommendations.

WE BRING FACIAL COSMETICS UP TO A POINT SINCE 1919

Private label manufacturing

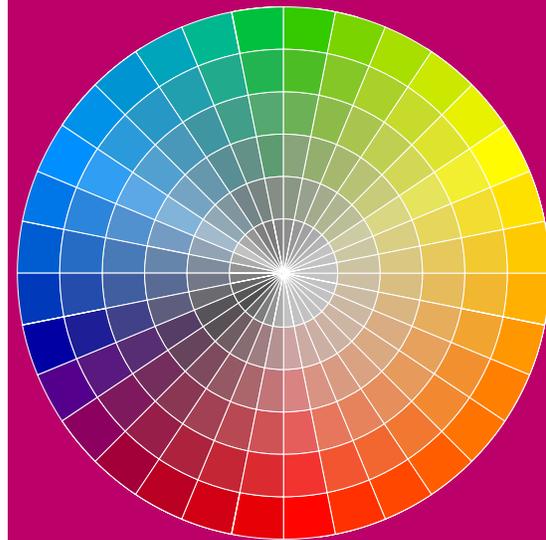

For over 100 years, we have been manufacturing high-quality sharpeners, and for several decades, we have specialized in the high precision required for cosmetic sharpeners. Our renowned 6000 series is celebrated not only for featuring one of the hardest blades in the world but also for delivering the highest quality sharpening performance available. Thanks to our unique DBS® system (Double-Blade-System®), our sharpeners produce a perfectly rounded point on pencils of any texture, ensuring clean and consistent results for both soft and hard formulas.

We offer specialized solutions for both traditional wooden barrels and modern plastic pencils, ensuring that regardless of the casing material, your product is always handled with care.

To ensure a perfect fit for your specific portfolio, we provide models for a wide range of outer diameters—including 8mm, 10mm, 12mm, and 16mm—while our versatile adapters seamlessly cover any intermediate sizes.

Beyond technical performance, we offer full customization to align with your brand identity; every sharpener can be tailored to your specific needs regarding material, color, printing, and decoration. Whether you require models with or without removable containers, or those equipped with integrated cleaning sticks for easy maintenance, our sharpeners are designed to be the perfect, customizable companion to your cosmetic products.

**Because Great Brands
Deserve Perfect Points**

Commitment to Quality

Delivering the highest quality with a focus on durability, precision, and superior performance. As industry leaders, we combine traditional craftsmanship with modern innovation to create tools that are not only functional but represent a long-term investment in quality.

Innovation and Creativity

At **KUM®**, we drive innovation and creativity to set new standards in the industry. By combining decades of German engineering with forward-thinking design, we empower our partners to deliver unparalleled precision and style to the global beauty market.

Trusted by Major Cosmetic Companies

Our products are trusted by leading cosmetic brands worldwide. A testament to **KUM®**'s unmatched quality and reliability.

Eco Friendly

We are dedicated to sustainability and environmental protection. Elevate your brand with our eco-friendly sharpening solutions. By choosing our sustainable materials—such as Biofibre and PCR—you combine professional performance with a clear commitment to the planet.

YOUR BRAND

Your logo in your colors and your design. Give our high-performance sharpeners your unique identity. With premium printing and custom colors, we turn every tool into a signature piece for your brand.

Your Customization

Whether you need a fine tip or a soft round point, an open design or a secure container—we provide the customizable solution for your specific application.

WHY KUM?

In-House Production

Our commitment to excellence begins with our fully integrated in-house production. This even includes the internal development and manufacturing of our own machinery and moulds to ensure the highest possible degree of quality and precision. By controlling every step of the manufacturing process, we maintain maximum flexibility, allowing us to implement individual customer requirements swiftly while guaranteeing that every component meets our rigorous technical standards.

Quality Control

To ensure absolute reliability, quality control takes place continuously during production in order to be able to react fast to any deviances from our high quality standards. We utilize state-of-the-art testing procedures and a seamless monitoring system that tracks every production run. This proactive approach ensures that flawless products leave our facility, providing our partners with the consistency and durability they expect from a market leader.

Versatility

We provide precision sharpening solutions for the entire spectrum of beauty tools. Our portfolio includes sharpeners for all cosmetic pencil diameters, specialized formulations, and various pencil casing materials. Whether you are working with traditional wood or modern high-tech polymers, our sharpeners are engineered to adapt to your specific product requirements, ensuring a perfect result every time.

Innovation

Innovation lies in our DNA. Finding solutions for all pencils is our everyday mission and the driving force behind our research and development. We don't just follow industry trends; we set them by constantly experimenting with new materials, ergonomic designs, and sustainable production methods. Our goal is to anticipate the future needs of the cosmetic markets, delivering patented technologies that redefine the sharpening experience.

Patented Excellence

Our legacy is built on a foundation of intellectual property and pioneering spirit. For over a century, we have patented groundbreaking ideas, taking innovation so seriously that some of our sharpeners are ahead of the pencils they were designed for. This commitment to excellence ensures that our partners always stay one step ahead of market trends with technology that is both proven and future-proof.

Dynamic Torsion Action®

All of our sharpeners are equipped with our unique KUM® Dynamic Torsion Action® system, the gold standard in sharpening technology. Under constant tension, the blade adjusts dynamically to the forces bearing on the pencil while sharpening, preventing the lead from snapping and ensuring always perfect sharpening results.

This advanced engineering ensures a flawless performance regardless of the pencil casing used—whether you offer traditional wooden barrels or modern plastic pencils. Our DTA system provides the flexibility needed to handle different densities and textures with ease.

Our Blades

At the heart of every great beauty tool lies a masterpiece of engineering. For a sharpener to be truly exceptional, its blade must work with effortless precision — delivering a flawless point every single time.

We take the difficult path so your routine stays simple. By creating one of the hardest blades in the world, we ensure a razor-sharp edge that lasts, preserving the life of your favorite pencils and providing a professional finish that no one else can match.

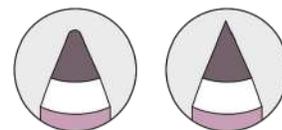

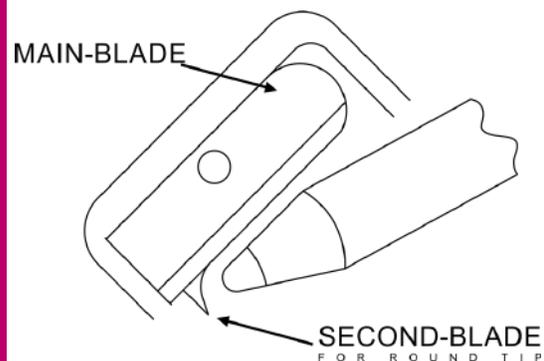

Double Blade System®

In the world of cosmetic pencils, achieving the perfect point is paramount. That's why KUM® has spent years developing the Double-Blade System® for our series 6000 sharpeners. As an original invention of the manufacturer, this technology is available only on KUM® Cosmetic Sharpeners.

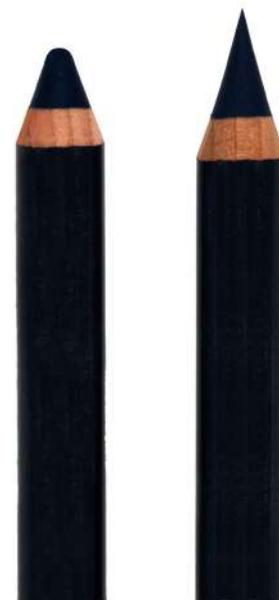

Each KUM® Cosmetic Sharpener in the series 6000 can be equipped with two blades. The primary blade at the top sharpens the pencil to a fine point, while the second blade delicately shapes the round point. This high-precision positioning allows for the effective shaping of all types of formulations and barrels—including Eyebrow liners, Lipliners, and Eyeliners—ensuring perfect results even for the most delicate formulations used today.

This innovative system is the result of KUM®'s tireless commitment to R&D in combination with precision manufacturing capabilities. Every detail has been meticulously considered to provide the most precise and effortless sharpening experience possible.

So, whether you're a professional make-up artist or you are looking for the best possible cosmetic sharpener for your brand, the KUM® Double-Blade System® offers the ultimate in precision and quality. Experience the difference for yourself and discover why KUM® is a leader in cosmetic pencil sharpening technology.

DIFFERENT TIPS
with or without KUM DBS®

- **Protects sensitive blades**
- **Ensures maximum hygiene**
- **Always at hand**
- **No chemicals needed**

Cleaning Stick

Most of our sharpeners come equipped with an integrated cleaning stick, specifically designed to easily remove waxy residues left behind by cosmetic formulations. While sharpening is inherently the most hygienic method for makeup application—as it provides a fresh, bacteria-free surface with every use—it is essential to keep the tool itself pristine.

Our high-quality blades are precision-engineered and extremely sensitive; therefore, we always recommend using the dedicated cleaning stick for maintenance. Using other objects to clean the sharpener can easily damage the delicate razor-sharp edge, compromising the sharpening result. The cleaning stick is always at hand, ensuring the blade remains unharmed and the sharpener stays ready for immediate use.

Furthermore, it allows for a thorough cleaning without the need for aggressive chemical agents, preserving the longevity and performance of your KUM® sharpener.

Adapter

To ensure our sharpeners are as versatile as your product range, almost all of our models are available with integrated adapters. These precision-engineered inserts allow for a seamless diameter reduction, enabling a single sharpener to accommodate a variety of pencil sizes found on the market today.

The key advantage of our system is its effortless functionality: the adapter is easily removable, allowing you to switch between different diameters in seconds. This means you always have multiple sizes at hand, providing the perfect fit for various pencil dimensions within one compact tool.

It ensures that whether you are using a slim liner or a thicker pencil, the barrel is always perfectly centered for a precise sharpening result. It is the ideal solution for brands with a diverse portfolio, offering maximum compatibility and convenience for the end user.

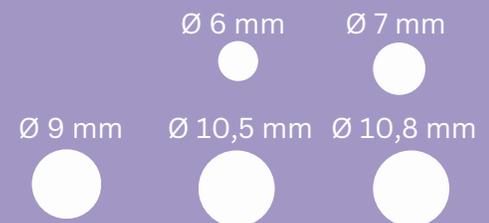

To help you quickly identify the right solution for your needs, all models equipped with or available with an adapter are clearly marked and labeled accordingly.

Check compatibility by pencil diameter.

- **Easily removable insert**
- **Versatile diameter reduction**
- **Multiple sizes integrated**
- **Perfect pencil centering**

The Powder Solution

Our innovative powder sharpener is designed to do more than just maintain a point — it is a sophisticated tool for maximizing your product's potential and eliminating waste.

Dual-Function Shaping:

The sharpener features a uniquely textured, ridged surface on the interior. By gently rubbing your powder pencil against this surface, you can create a perfectly flat edge. This allows for a broad, professional application — ideal for shading larger areas with ease and precision.

Zero-Waste Collection System:

Traditional sharpening often leads to lost product. Our design changes that. Any excess powder generated during the shaping or sharpening process is captured within the integrated transparent container. Instead of being discarded, this high-quality pigment is safely stored and ready for use.

Simply open the container and use a powder brush to pick up the collected residue. This ensures that every milligram of your premium pencil is utilized, making it an economical and eco-conscious choice. Whether you are creating a sharp line or a soft, diffused look, our sharpener ensures that no product goes to waste.

The Butterfly

MADE FOR
PROFESSIONALS
designed for everyone

Experience ultimate flexibility with a sharpener that switches instantly between a round and sharp point using our integrated cleaning stick.

KUM® Butterfly

Ø 8 mm
*with waste container, equipped with
cleaning stick*

	ArtNr.	VP	Carton
Butterfly	602.50.21	10	420

Designed specifically for the high demands of professional make-up artists, this sharpener combines ergonomic excellence with ultimate versatility. The design allows it to serve as a pencil stand as well.

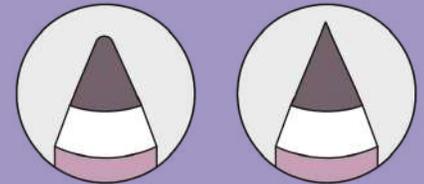

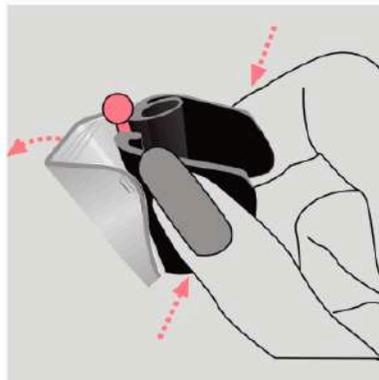

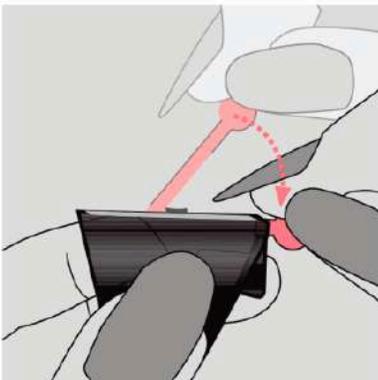

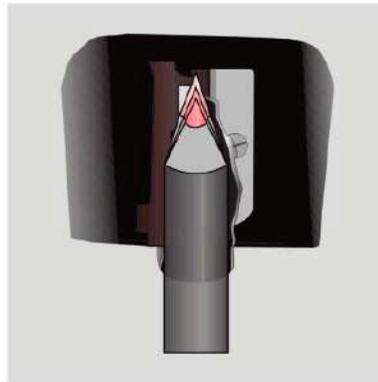

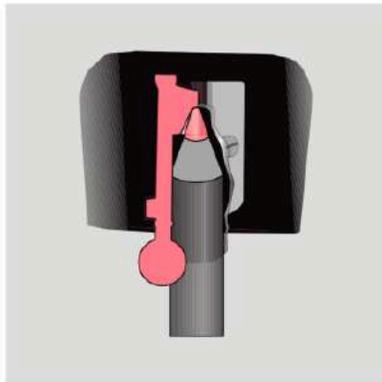

This sharpener can be customized to your needs. Customization possibilities include individual colors, metallization, Swarovski stones etc.

Its unique design allows you to customize the pencil tip with a single tool: by simply inserting or removing the cleaning stick, you can switch between a rounded point or a classic sharp point to suit your specific application.

The extra-wide cleaning stick is engineered for fast, effortless maintenance, ensuring waxy residues are removed without ever touching or damaging the sensitive blade.

For seamless maintenance, the sharpener features an intuitive container system. By simply pressing or squeezing the sides, the container opens easily, allowing you to quickly dispose of shavings or access the cleaning stick.

Dual-Point Technology:
Removable stick for a sharp point;
inserted stick for a round point.

Good to know:

For maximum efficiency during application, the sharpener is designed to be worn on the fingers. This allows artists to sharpen and sanitize pencils instantly between steps, maintaining the highest hygienic standards without interrupting the creative flow.

Sustainable Innovation

At KUM®, we believe that high performance and environmental responsibility should go hand in hand. With the introduction of our Biofibre® series, we offer a sustainable alternative to traditional plastics—without compromising on the precision and quality you expect from our 6000 series sharpeners.

The foundation of this series is Biofibre® Silva, a cutting-edge bioplastic compound that redefines sustainable manufacturing. It is 97% bio-based and made almost entirely from renewable raw materials, completely avoiding fossil resources. This material consists of a biopolymer matrix reinforced with natural wood fibers and is certified by DIN CERTCO for its biodegradability, helping to significantly reduce long-term environmental waste.

Choosing Biofibre® Silva is a commitment to a greener planet. By utilizing renewable biomass instead of petroleum, our sharpeners achieve a significantly better CO2 balance compared to classic fossil-based plastics.

This helps your brand reduce its carbon footprint and meet the growing demand for eco-friendly beauty tools. This globally recognized seal of quality provides you and your customers with the assurance that your products are as sustainable as they claim to be.

Sharpeners available in this material are marked with this symbol.

Key Benefits:

- **Eco-Friendly:** 97% renewable raw materials.
- **Carbon-Reduced:** Superior CO2 balance vs. traditional plastic.
- **High Performance:** Engineering-grade stability and precision.
- **Natural Aesthetic:** Characteristic organic brown finish (no artificial dyes).

PCR Material

The following models are examples of our products available in PCR. For a complete overview, please refer to our base models; those available in PCR material are clearly marked and labeled throughout the catalog.

PCR material can only be colored to a limited extent due to the natural nature of the material. The material can only be colored in black or grey.

Giving Plastic a Second Life

At KUM®, we are committed to closing the loop in the production cycle. Our PCR (Post-Consumer Recycled) line is a testament to this mission. These sharpeners are manufactured from recycled household and industrial waste—primarily collected from packaging materials—transforming discarded plastic into high-quality professional tools.

By choosing our PCR line, you are actively contributing to a circular economy. This material significantly reduces plastic waste and lowers the environmental impact compared to virgin plastic production. It is the ideal sustainable choice for brands that prioritize environmental responsibility without compromising on durability or mechanical performance.

Key Benefits:

- **Circular Economy:** Actively reduces plastic waste by repurposing post-consumer materials.
- **Eco-Efficiency:** High-quality performance with a significantly lower carbon footprint.
- **Proven Durability:** A robust and sustainable alternative that meets our strict quality standards.

Sharpeners available in this material are marked with this symbol.

Eco Material

Our ECO series represents the perfect fusion of high-end aesthetics and environmental responsibility. Crafted from high-quality Mater-Bi, a pioneering biopolyester derived from renewable non-GMO corn starch and vegetable oils, this material offers a sophisticated alternative to conventional plastics.

The ECO series is engineered for a minimal footprint. Under industrial composting conditions of high temperatures and humidity, the casing is 100% biodegradable. This ensures your beauty tools align with the values of clean beauty and eco-conscious innovation.

Key Benefits:

- **Renewable Basis:** Made from high-performance PLA derived from corn starch, reducing reliance on fossil fuels.
- **100% Biodegradable:** Fully compostable casing under controlled industrial conditions.
- **The Smart Alternative:** The perfect bridge between classic professional optics and modern sustainability.

Sharpeners available in this material are marked with this symbol.

LONG LASTING
ANTIBACTERIAL EFFECT

Clean and Hygienic

A cosmetic sharpener must deliver more than just a clean cut; it must support a flawless, hygienic beauty routine. This is especially critical for cosmetic pencils used on sensitive areas like the eyes and lips, where direct skin contact occurs daily.

Our KUM® Medipharma series is crafted from an innovative Antibac® material. This high-grade polystyrene is enriched with integrated silver ion technology, specifically engineered to inhibit bacterial growth on the sharpener's surface. By reducing the risk of contamination, it ensures a safer and more hygienic application for lip liners, eyeliners, and brow pencils.

Beyond its protective properties, the Medipharma series offers uncompromising performance. The durable material quality ensures long-lasting reliability, while our precision blades are designed to sharpen even the softest cosmetic cores without breakage. It is the ideal solution for brands that prioritize professional standards, product safety, and clean beauty.

Key Benefits

- **Active Surface Protection:** Polystyrene-based material enriched with silver ions to inhibit bacterial growth.
- **Enhanced Hygiene:** Designed specifically for beauty tools used in close proximity to the skin.
- **Superior Blade Performance:** Delivers precise results without damaging delicate cosmetic leads.
- **Durable Engineering:** Built for long-term reliability in both professional and private consumer environments.
- **Professional Choice:** The perfect addition to private label ranges and premium beauty collections.

Magnesium Sharpener

Our magnesium sharpeners represent the perfect blend of strength, sustainability, and technical excellence. As a material, magnesium offers unique advantages that make it particularly valuable for the cosmetic industry:

Superior Stability & Lightweight: Magnesium is one of the lightest metal construction materials, yet it offers exceptional structural integrity. This ensures that the blade remains perfectly aligned, providing a consistent, high-precision sharpening result every time.

Eco-Friendly & Recyclable: Magnesium is a natural, abundant element and is 100% recyclable. Choosing magnesium sharpeners is a conscious decision for a sustainable production cycle and a reduced environmental footprint.

Precision Engineering for Soft Formulas: The inherent rigidity of the magnesium body minimizes vibrations during sharpening. This is crucial for delicate cosmetic formulations, ensuring a smooth, clean cut without crumbling or breaking the soft lead.

available with or without waste
container, equipped with cleaning stick*

KUM® 6020 GOLD

*Ø 8 mm & 12 mm
without waste container, equipped with
cleaning stick*

Our gold metallization bestows a sense of prestige and warmth upon every sharpener. Designed for brands that represent the pinnacle of luxury, this finish reflects light with a rich, mirror-like depth that commands attention.

Whether as a limited edition highlight or a signature staple of your premium line, the gold finish transforms a daily essential into an exquisite object of desire. It is the perfect choice for those who want their tools to exude a sense of tradition, opulence, and enduring value

This finish is available as a classic high-gloss shine or a matte finish for a modern, muted elegance.

equipped with cleaning stick

The models shown are examples featuring our premium metallization finishes. For a complete overview of all compatible versions, please refer to our base models.

Metallization Silver

The following models are examples of our products available in metallized surface. For a complete overview, please refer to our base models.

KUM® 6005 SILVER

*Ø 8 mm
available with or without waste
container, equipped with cleaning stick*

KUM® 6020 SILVER

*Ø 8 mm & 12 mm
without waste container, equipped with
cleaning stick*

For a look that is sharp and unmistakably modern, our silver metallization offers a sleek, high-tech aesthetic. This finish captures the essence of contemporary luxury, providing a reflective surface that complements any professional beauty set.

The silver finish stands for precision and effortless style. Its crisp radiance enhances the contours of the sharpener, giving it a futuristic edge. To perfectly match your brand's identity, **this finish is available in two variations: a high-gloss, mirror-like shine or a refined matte finish.** It is the ideal choice for brands conveying innovation and minimalist sophistication.

Products on Request

What sets us apart is our complete control over the creation process. From the initial concept and technical construction to the final production, our workflow is handled exclusively in-house. This vertical integration allows us to offer a level of flexibility and customization that is unique in the industry.

Every brand has its own DNA, and we provide the technical craftsmanship to match it. Whether you are looking for a specific ergonomic design or a completely new silhouette for a high-volume launch, our engineering team works directly with you to develop bespoke solutions. Our in-house expertise allows us to evaluate and refine even the most ambitious concepts, ensuring that custom designs are translated into technically sound, high-precision instruments.

For projects requiring an extraordinary statement, we offer specialized high-end editions. This includes our renowned heavyweight luxury sharpener—a masterpiece of substance and tactile elegance designed for the most prestigious collections. While these exclusive variants represent a significant investment in material and craftsmanship, they offer a sensory experience and a level of durability that is truly peerless.

By keeping development and construction under one roof, we offer:

- Rapid Prototyping: Faster transitions from your idea to the physical tool.
- Technical Excellence: Seamless integration of our high-precision blades into special casings.
- Collaborative Development: From bespoke shapes for high-volume orders to ultra-premium luxury variants, we work closely with you to translate your vision into technically viable, high-quality products.

Label, Color and Print

LABELS

We offer a comprehensive range of customization options to ensure your products are retail-ready. Beyond our high-quality printing and color matching, we provide labeling services, including the application of **EAN codes and SKU labels**.

COLORS

To provide you with maximum flexibility and speed, we maintain a selection of standard colors in stock for our most popular models, ready for immediate branding.

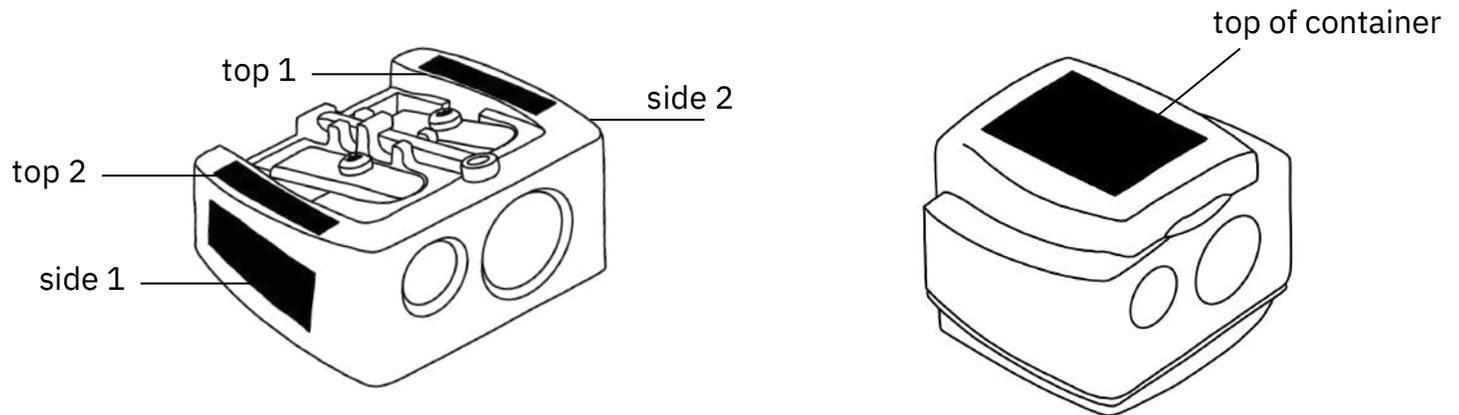

For those looking to create a truly unique product that perfectly aligns with their corporate identity, we offer **Pantone Color Matching**. This service allows us to produce your sharpeners in any specific shade, ensuring a seamless match with your brand's color palette. Whether you choose from our stock range or require a bespoke Pantone color, we ensure the highest consistency and quality.

DECORATION

All of our models are customizable to reflect your brand's unique identity. We offer high-quality **Tampoprint** (pad printing) for precise, multi-colored logos and **Hot Stamping** for an elegant, premium metallic finish.

Because our range features a variety of shapes and dimensions, the printable areas differ from model to model. To ensure the perfect placement of your logo, please inquire about the specific printing areas for your chosen sharpener models. Our team is ready to provide the technical specifications needed to bring your branding to life.

Shown here: An overview of the designated printing areas for Model 6023.

Packaging Information

All KUM® products come with high-quality **standard packaging as a baseline**. To meet your specific retail or promotional needs, we also offer a variety of **custom packaging models**. Whether you require individual solutions, specialized branding, or retail-ready fulfillment, please contact us for more information on our available options. Additional packaging options available upon request.
